Objective

Third-year Electronics and Communication Engineering student aiming for an AI Engineer role. Hands-on builder of AI-driven projects, currently strengthening core skills in Python, machine learning, and deep learning.

Education

B.E. in Electronics and Communication Engineering Sri Sairam College of Engineering, Bangalore | Expected graduation: 2028

Projects

TRUST-CV (Smart India Hackathon, SIH26228) Zero-trust computer vision integrity platform with a frontend and backend. Built using AI coding agents. Repository: Block-Sentinal.

Discovery Agent An AI agent that analyzes an industry, identifies gaps and unsolved problems, then writes and finalizes the program needed to fill each gap.

Sollunga Bot An AI ordering bot for shopkeepers. Customers place orders in Tanglish or English through text, voice, or mail, and orders are fulfilled after shopkeeper approval. Currently live on Telegram.

YUVA AI (Personal AI Assistant) A personal assistant with a password-based mode system that changes how it interacts with its creator, plus a built-in random password generator.

Skills

Currently learning (in progress): Python, NumPy, Pandas, Scikit-learn, PyTorch, OpenCV

Working knowledge: AI-assisted development (vibe coding), prompt engineering, Telegram Bot API, Git and GitHub, HTML, CSS, JavaScript

Core background: Digital signal processing, electronics and communication fundamentals

Certifications

Python 3.4.3 Training, Spoken Tutorial Project, IIT Bombay (issued through Sri Sairam College of Engineering): completed with a score of 95%, June 2026.
